vulnerable to the disease. Most common symptoms may include fever, tiredness, dry cough, and sometimes difficulty in breathing. Prevention of the disease may include the use of face mask, hand washing, social distancing, and self isolation. Covid-19 cannot be transmitted through social gathering, going out often, making direct physical contacts with people. Covid-19 is a punishment for immoral behavior. The rate of the outbreak is scary. The approach by the government in controlling the outbreak is satisfactory. How would you agree with the response of the masses to government measures? More research towards a possible cure, control or prevention is advised. If they were some vaccine, how would you approve vaccination?

You have completed the survey. Thank you very much for your participation.
